

[KB] AIOS-Core & Squads Architecture Manual (Live Consultoria)

Document Type: System Architecture Knowledge Base

Target Audience: AI Systems (NotebookLM, LLMs) and Technical Managers.

Purpose: Provide a structural map of all available AI Squads, their agents, dependencies, and automated workflows within the Live Consultoria ecosystem.

1. SYSTEM OVERVIEW

The environment operates under a multi-agent architectural model called **AIOS-Core**, managed by the **AntiGravity** extension. Operations are divided into specialized "Squads" (directories under `/squads/`). Each squad encapsulates specific prompts, Telegram Bot triggers, and integration scripts.

Total Active Squads: 6

1. `comms` (Comunicação & Atas)
2. `live-operations` (Operações Centrais & Consultoria)
3. `design` (UX & UI System)
4. `pm` (Project Management)
5. `contract-review-squad` (Legal & Compliance)
6. `ultimate-landingpage` (Marketing & Desenvolvimento Automático)

2. CORE SQUADS (NATIVE & LIVE-SPECIFIC)

2.1. Squad: Live Operations (`live-operations`)

Description: The central operational hub for "Live Consultoria". It manages the main Telegram Bot interface and ties together consulting, recruiting, and client onboarding.

- **Key Agent:** `consultant-support` (AI Assistant)
- **Key Capabilities:**
 - **C.R.A.F.T. Consulting:** Provides strategic diagnosis enriched with Google Drive RAG (Retrieval-Augmented Generation). Trigger: `/consultor [query]`.
 - **Live Recruiter:** Implements the STAR methodology for analyzing candidates and jobs. Trigger: `/rh [candidato/vaga]`.
 - **Proposals (M.A.P.C.A):** Generates commercial proposals automatically. Trigger: `/proposta [dados]`.
 - **Integrations:** Google Drive, Google Calendar, Telegram Bot API.

2.2. Squad: Comms (`comms`)

Description: Responsible for formal documentation, meeting minutes, and corporate presentations. Forms an automated pipeline.

- **Agents:**
 - `secretary` (Executive Secretary & Governance Auditor): Audits transcripts and generates meeting minutes with 5W2H action plans. Trigger: `/ata [texto]`.
 - `presentation-creator` (Front-End Engineer & Corporate Copywriter): Converts meeting minutes into branded HTML presentations. Trigger: `/apresentacao [texto]`.
- **Workflow:**
 - **Linear Pipeline:** Transcript -> Secretary generates ATA -> *[Human Review]* -> Presentation Creator generates HTML.
 - **Auto-Trigger:** The `secretary` prompt can automatically trigger the presentation creation.

2.3. Squad: Design (`design`)

Description: Maintains the "Unified Design System V6.0" and visually audits documents generated by other squads.

- **Source of Truth:** `Guia de estilo Live V6.0.md`
- **Rules Executed:** Dark Mode (#06192a), Laser Green accents (#00e800), Poppins/Merriweather typography, UI physics (micro-springs, refractions).
- **Key Triggers:**

- `/design-check`: Applies the style guide to consulting documents.
- `/design-review`: Audits external documents for hierarchy, contrast (WCAG AAA), and FCP (<50ms).

2.4. Squad: Project Management (`pm`)

Description: Handles task tracking, status reports, and integrates heavily with ClickUp.

- **Key Agent:** `pm` (Project Manager)
 - **Integrations:** ClickUp API v2 (via PAT).
 - **Key Capabilities:**
 - **Action Tracking:** Extracts the 5W2H action plan from the `comms` squad meeting minutes and creates tasks in ClickUp. Trigger: `/pm-track [ata.md]`.
 - **Sync & Status:** Bi-directional sync between local project files and ClickUp. Triggers: `/pm-sync` and `/pm-status`.
-

3. SPECIALIZED EXPANSION SQUADS

3.1. Squad: Contract Review (`contract-review-squad`)

Description: Specialized highly-technical legal squad for automated contract review.

- **Agents:** Clause Extractor, Risk Flagger, Playbook Enforcer, Redline Drafter, Summary Reporter.
- **Capabilities:**
 - Extracts clauses and flags risks against corporate compliance playbooks.
 - Drafts redlines (suggested edits) for problematic clauses.
 - Generates an executive risk-assessment summary.

3.2. Squad: Ultimate Landing Page (`ultimate-landingpage`)

Description: A massive, end-to-end fullstack squad for generating ultra-high conversion landing pages automatically.

- **Agents (9 Total):** Strategist, Researcher, Copywriter, Design Architect, Image Creator, Frontend Dev, Backend Dev, Integrator, Reviewer.
 - **Architecture Generated:**
 - **Frontend:** Next.js, React, Tailwind, WCAG AAA accessibility, Light/Dark Modes.
 - **Backend:** Python FastAPI (Lead capture, Admin Panel, CSV export).
 - **Integrations:** WhatsApp (Evolution API) and Email (MCP SMTP).
 - **Image Generation:** Uses nano-banana-pro (Google Gemini) and optionally DALLÉ-3/Flux via external tools.
 - **Output:** A complete, deploy-ready marketing application.
-

4. CROSS-SQUAD INTEROPERABILITY (DATAFLOW)

The system is designed so squads feed information to one another:

1. `live-operations` kicks off a consulting engagement, capturing initial audio/transcripts.
2. `comms` processes the transcripts into an auditable Meeting Minute (Ata) and an HTML slide deck.
3. `pm` reads the Meeting Minute, extracts the 5W2H action items, and pushes them to ClickUp.
4. `design` can be called at the end to validate the output HTML presentations.
5. If the project involves a new product launch, `ultimate-landingpage` is engaged to build the marketing front. If it involves partnerships, `contract-review-squad` audits the paperwork.
